

Data on the Web Best Practices: Challenges and Benefits

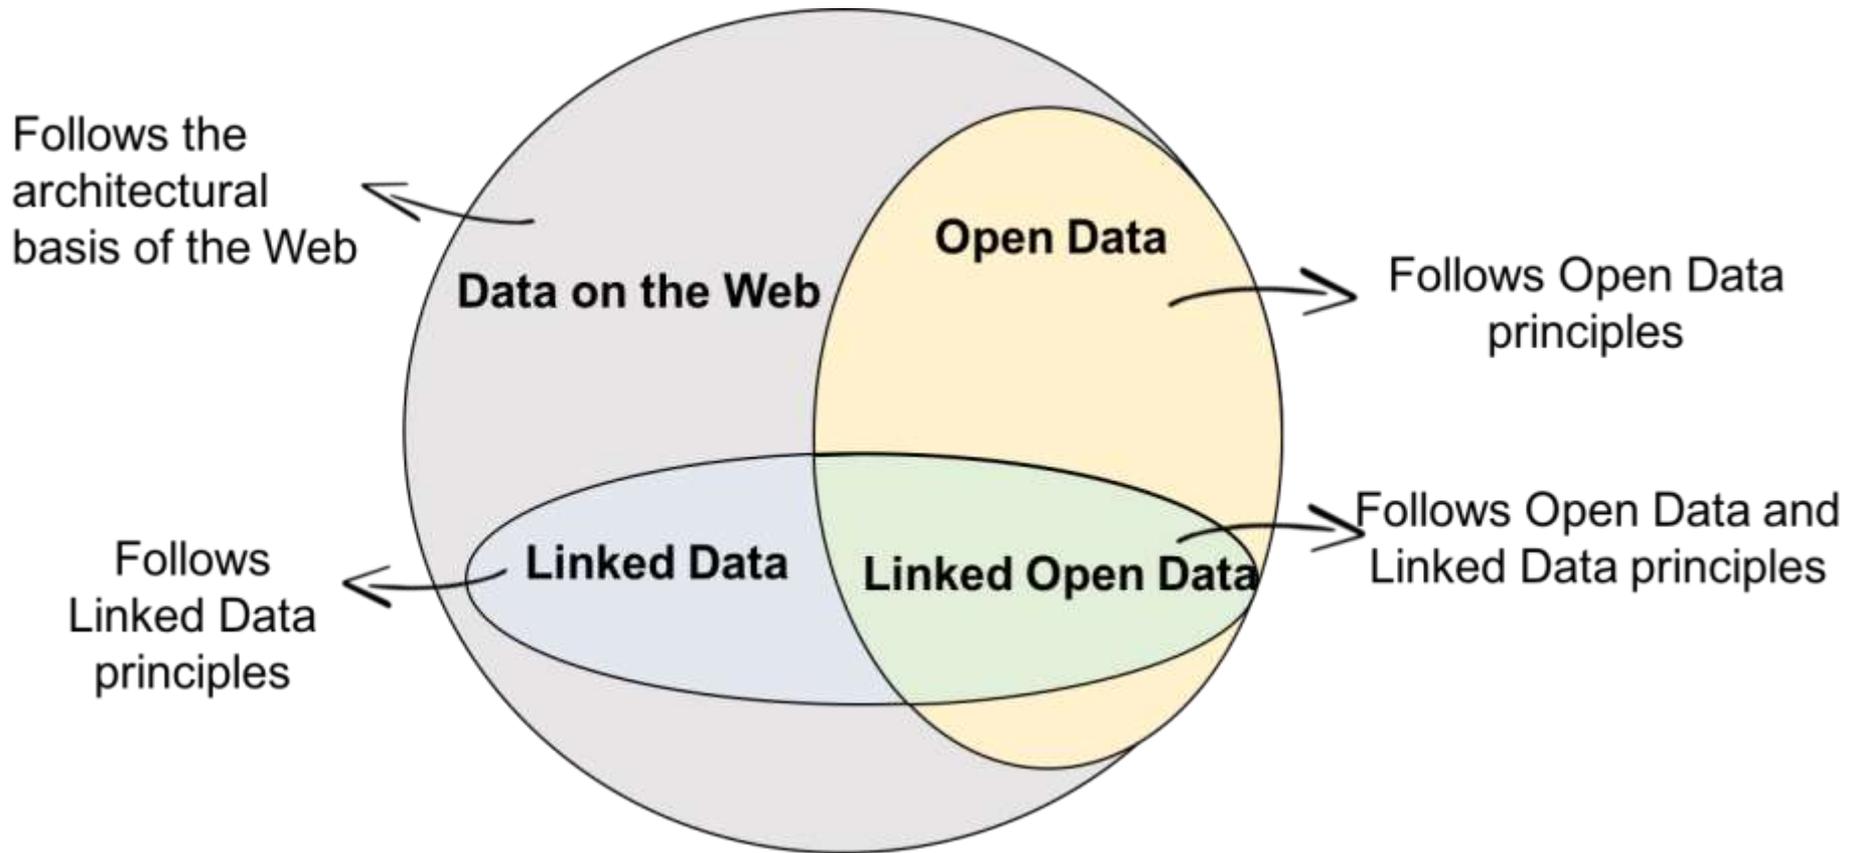

Bernadette Lóscio, Caroline Burle and Newton Calegari

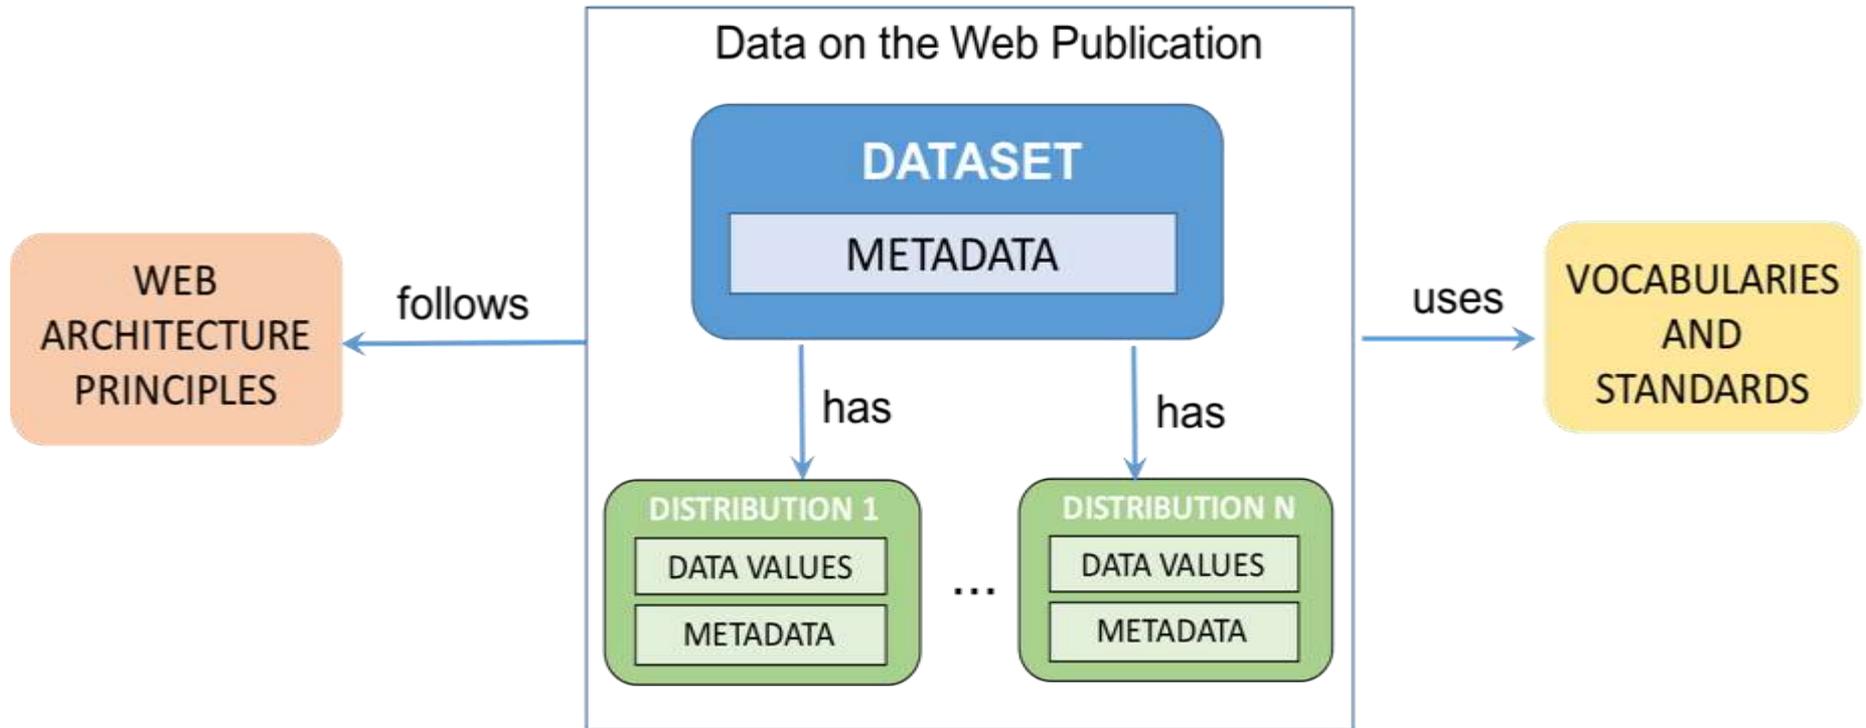

Topics to be discussed

- Data on the Web Context
- Data on the Web use cases
- Data on the Web Challenges and Requirements
- Data on the Web Best Practices
- Data on the Web Best Practices Benefits

Data on the Web x Open Data x Linked Data

Data on the Web Context

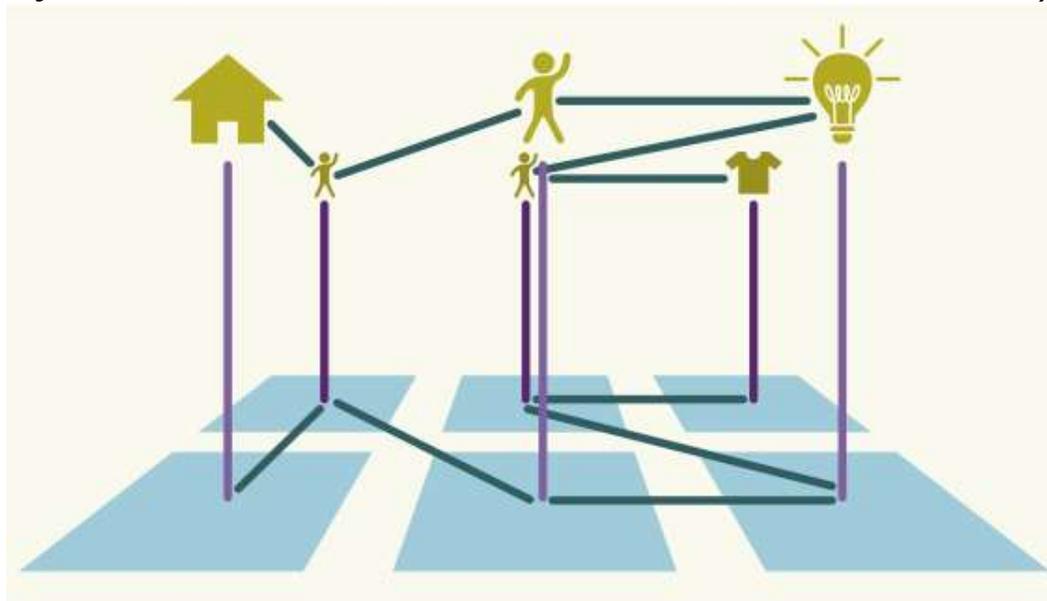

Players of the data on the Web ecosystem

Several types of data sources (transactional systems, sensors, mobile devices, documents...)

*Data publisher:
publishes and shares
data*

*Data consumer:
reuses the data and
might generate new
data*

Source: <http://ceweb.br/livros/dados-abertos-conectados/capitulo-1/>

How to enable the data reuse?

How to enable the data reuse?

A common understanding between data publishers and data consumers becomes fundamental.

Without this agreement, data publishers' efforts may be incompatible with data consumers' desires.

Consumes data

Publishes data

W3C® Data on the Web Best Practices Working Group

The **Mission** of the Data on the Web Best Practices Working Group, part of the [Data Activity](#), is:

1. to develop the **open data ecosystem**, facilitating better communication between developers and publishers;
2. to provide **guidance to publishers** that will improve consistency in the way data is managed, thus promoting the re-use of data;
3. to **foster trust in the data** among developers, whatever technology they choose to use, increasing the potential for genuine innovation.

Data on the Web use cases

1. Introduction
2. Use Cases
 - 2.1 ASO: Airborne Snow Observatory
 - 2.2 BBC
 - 2.3 Bio2RDF
 - 2.4 BuildingEye: SME use of public data
 - 2.5 Dados.gov.br
 - 2.6 Digital archiving of Linked Data
 - 2.7 Dutch Base Registers
 - 2.8 GS1 Digital
 - 2.9 ISO GEO Story
 - 2.10 The Land Portal
 - 2.11 LA Times' Reporting of Ron Galperin's Infographic
 - 2.12 LusTRE: Linked Thesaurus fRamework for Environment
 - 2.13 Machine-readability and Interoperability of Licenses
 - 2.14 Mass Spectrometry Imaging (MSI)
 - 2.15 OKFN Transport WG
 - 2.16 Open City Data Pipeline
 - 2.17 Open Experimental Field Studies
 - 2.18 Resource Discovery for Extreme Scale Collaboration (RDESC)
 - 2.19 Recife Open Data Portal
 - 2.20 Retrato da Violência (Violence Map)
 - 2.21 Share-PSI 2.0: Uses of Open Data Within Government for Innovation and Efficiency
 - 2.22 Tabulae - how to get value out of data
 - 2.23 UK Open Research Data Forum
 - 2.24 Uruguay Open Data Catalog
 - 2.25 Web Observatory
 - 2.26 Wind Characterization Scientific Study
3. General Challenges
 - 3.1 A Word on Open and Closed Data
 - 3.2 Requirements by Challenge
4. Requirements
 - 4.1 Requirements for Data on the Web Best Practices
 - 4.2 Requirements for Quality and Granularity Description Vocabulary
 - 4.3 Requirements for Data Usage Description Vocabulary

Publishing data on the Web is more than just publishing data!

Data on the Web Challenges

- Metadata (*for humans & machines*)
- Data Licenses (*how to permit & restrict access?*)
- Data Provenance & Quality (*how to add trust?*)
- Data Versioning (*tracking dataset versions*)
- Data Identification (*identifying datasets and distributions*)
- Data Formats (*which data formats to use?*)

Data on the Web Challenges

- Data Vocabularies (*how to promote interoperability?*)
- Data Access (*access options*)
- Data Preservation
- Feedback (*how to engage users?*)
- Data Enrichment (*adding value to data*)
- Data Republication (*reuse data responsibly*)

12 challenges and 42 requirements

Audience:

BP are designed to meet the needs of information management staff, developers, and wider groups such as scientists interested in sharing and reusing research data on the Web

Source: <http://w3c.github.io/dwbp/bp.html>

[Best Practice 1](#): Provide metadata

[Best Practice 2](#): Provide descriptive metadata

[Best Practice 3](#): Provide structural metadata

[Best Practice 4](#): Provide data license information

[Best Practice 5](#): Provide data provenance information

[Best Practice 6](#): Provide data quality information

[Best Practice 19](#): Use content negotiation for serving data available in multiple formats

Evidence

Relevant requirements: [R-ProvAvailable](#), [R-MetadataAvailable](#)

[Best Practice 23](#): Make data available through an API

Intended Outcome

Humans will know the origin or history of the dataset and software agents will be able to automatically process provenance information.

[Best Practice 10](#): Use persistent URIs as identifiers within datasets

[Best Practice 11](#): Assign URIs to dataset versions and series

[Best Practice 12](#): Use machine-readable standardized data formats

[Best Practice 13](#): Use locale-neutral data representations

[Best Practice 14](#): Provide data in multiple formats

[Best Practice 15](#): Reuse vocabularies, preferably standardized ones

[Best Practice 16](#): Choose the right formalization level

[Best Practice 17](#): Provide bulk download

[Best Practice 18](#): Provide Subsets for Large Datasets

[Best Practice 26](#): Avoid Breaking Changes to Your API

[Best Practice 27](#): Preserve identifiers

[Best Practice 28](#): Assess dataset coverage

[Best Practice 29](#): Gather feedback from data consumers

[Best Practice 30](#): Make feedback available

[Best Practice 31](#): Enrich data by generating new data

[Best Practice 32](#): Provide Complementary Presentations

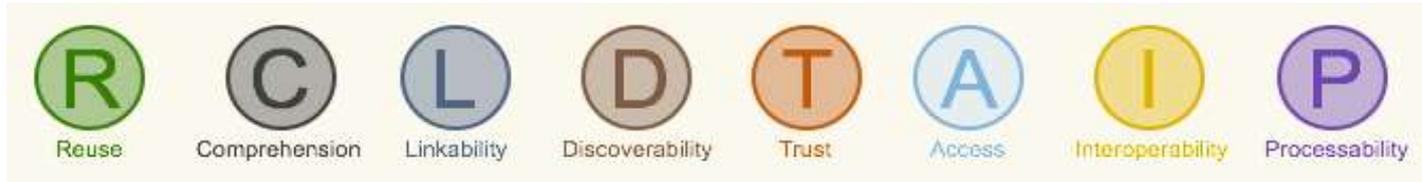

[Best Practice 33](#): Provide Feedback to the Original Publisher

[Best Practice 34](#): Follow Licensing Terms

[Best Practice 35](#): Cite the Original Publication

DWBP Benefits

Each benefit represents an improvement in the way how datasets are available on the Web

Reuse

- BP: Provide data license information
- BP: Provide versioning information
- BP: Provide version history
- BP: Use non-proprietary data formats
- BP: Provide data in multiple formats
- BP: Use a trusted serialization format for preserved data dumps
- BP: Enrich data by generating new metadata
- BP: Provide data provenance information
- BP: Provide data quality information
- BP: Use persistent URIs as identifiers

Trustworthy

- BP: Assess dataset coverage
- BP: Assign URIs to dataset versions and series
- BP: Provide data up to date
- BP: Update the status of identifiers
- BP: Gather feedback from data consumers
- BP: Provide information about feedback
- BP: Provide data provenance information
- BP: Provide data quality information

Comprehension

- BP: Provide metadata
- BP: Provide locale parameters metadata
- BP: Provide structural metadata
- BP: Provide descriptive metadata

Linkability

- BP: Use persistent URIs as identifiers
- BP: Assign URIs to dataset versions and series

Accessibility

- BP: Provide bulk download
- BP: Follow REST principles when designing APIs
- BP: Provide real-time access
- BP: Maintain separate versions for a data API
- BP: Assess dataset coverage

Discoverability

- BP: Provide descriptive metadata
- BP: Use persistent URIs as identifiers
- BP: Assign URIs to dataset versions and series

Processability

- BP: Use machine-readable standardized data formats
- BP: Enrich data by generating new metadata

Interoperability

- BP: Use standardized terms
- BP: Re-use vocabularies

Best Practice 1: Provide metadata

Metadata must be provided for both human users and computer applications

Why

Providing metadata is a fundamental requirement for publishers and data consumers may be unaware of the metadata that helps human users and computer applications understand the aspects that describes a dataset or a data source.

Intended Outcome

Human-readable metadata will enable human users to understand the metadata will enable computer applications to process the data.

Possible Approach to Implementation

Possible approaches to provide *human-readable* metadata

- to provide metadata as part of an HTML page
- to provide metadata as a separate document

Possible approaches to provide *machine-readable* metadata

- machine readable metadata may be provided in a variety of formats. If it can be embedded in the HTML page, it should be. If published separately, they should be in a format that supports the reuse of multiple formats is best achieved by providing a single source of the metadata.

- when defining machine readable metadata, reusing existing standard terms and popular vocabularies are strongly recommended. For example, Dublin Core Metadata (DCMI) terms [[DC-TERMS](#)] and Data Catalog Vocabulary [[VOCAB-DCAT](#)] should be used to provide descriptive metadata.

BP Benefits

- **Comprehension:** humans will have a better understanding about the data structure, the data meaning, the metadata and the nature of the dataset.
- **Processability:** machines will be able to automatically process and manipulate the data within a dataset.
- **Discoverability:** machines will be able to automatically discover a dataset or data within a dataset.
- **Reuse:** the chances of dataset reuse by different groups of data consumers will increase.

Datasets must be identified by a persistent URI.

Why

Adopting a common identification system by any stakeholder in a reliable way. The and reuse.

Developers may build URIs into their code to dereference to the same resource over time.

Intended Outcome

Datasets or information about datasets with status, availability or format of the data.

Possible Approach to Implementation

To be persistent, URIs must be designed by creating a Web site designed for human consumption. For more on this topic, see, for example, the European Commission's guide to many other resources.

Where a data publisher is unable or unwilling to use a native approach is to use a redirection service such as [Permanent Identifiers for the Web](#) or [purl.org](#).

These provide persistent URIs that can be redirected as required so that the eventual location can be ephemeral. The [software behind such services](#) is freely available so that it can be installed and managed locally if required.

Digital Object Identifiers ([DOIs](#)) offer a similar alternative. These identifiers are defined independently of any Web technology but can be appended to a 'URI stub.' DOIs are an important part of the digital infrastructure for research data and libraries.

BP Benefits

- **Linkability:** it will be possible to create links between data resources (datasets and data items).
- **Interoperability:** it will be easier to reach consensus among data publishers and consumers.
- **Trust:** the confidence that consumers have in the dataset will improve.
- **Access:** humans and machines will be able to access up to date data in a variety of forms.

How can you contribute now?

Abstract

This document reports on evidence and implementations of the Data on the Web Best Practices [Candidate Recommendation](#). In particular, it demonstrates that the DWBP are already in use and are also implementable.

Status of This Document

This document is merely a W3C-internal document. It has no official standing of any kind and does not represent consensus of the W3C Membership.

1. Introduction

One of the main goals of the Data on the Web Best Practices ([DWBP](#)) is to facilitate interaction between publishers and consumers of data on the Web. A set of 35 Best Practices were created to cover different [challenges](#) related to data publishing and consumption, such as Metadata, Data licenses, Data provenance, Data quality, Data versioning, Data identification, Data formats, Data vocabularies, Data access and APIs, Data preservation, Feedback. Data enrichment and Data republication.
